

# Side-Lit & Top-Lit Definitions

For the purposes of daylight harvesting all daylit spaces can be broken down into Top-Lit, Side-Lit, or both.

Lighting Control & Design

Top-lit applications are often the easiest to design and have the highest provable rate of return for your client.

“Horizontal glazing” comes in many forms - the most effective is diffused skylights.

Examples of top-lit low-rise applications include warehouses and retail stores.

Side-lit applications also offer a large potential for energy savings, but require more careful consideration during design and commissioning.
