Wireless Switch & Receiver Receives 2007 ADEX Gold Award for Offering Total Control of Lighting System

(Los Angeles, CA – 1 May 2008) The Wireless Switch & Receiver, from Lighting Control & Design (LC&D), has received the 2007 ADEX Gold Award for Design Excellence for offering total control of the system. Design Journal, the international trade publication for interior designers, architects and facility managers, sponsors the ADEX Awards, the largest and most prestigious awards program for product design of furniture, fixtures and finishes marketed to the design trade.

LC&D's Wireless Switch & Receiver, which require no batteries or maintenance, can be stuck or screwed onto a flat surface for instant control of an LC&D system. Every transmitter is manufactured with a unique 32-bit address, allowing multiple wireless switches.

The receiver "sits" on the GR 2400 bus and is usually mounted in the ceiling of the room with the switches. Since it is wireless, the amount of expensive high voltage wiring needed is reduced. The receiver logs the 32 bit address of each switch within range and it may be programmed to operate any item on the GR 2400 bus. The Wireless Switch & Receiver are fully digital and maintenance free.

Design Journal introduced the Awards for Design Excellence (ADEX) in 1994 as a way of recognizing superior product design. Response from manufacturers was immediate as over 100 companies participated in the inaugural event. The 2008-09 ADEX Awards will attract upwards of 500 companies submitting approximately two thousand innovative new products.

An anonymous panel of professionals representing a cross section of the design industry conducts all voting for the ADEX Awards. ADEX judges are among the ablest in their respective areas of expertise and so the ADEX Award represents the best product designs of the year in the opinion of those who themselves reside at the top of their specialty. Specifiers who specialize in office design judge the contract entries, lighting specialists judge lighting entries; flooring specifiers judge flooring and so on.

Each category has potential for three award levels of platinum, gold or silver. Judges award points in several categories for each entry. Total points earned determine each product's score. Minimum scores are needed to qualify for awards. Winners are published each April in Design Journal. In their first year, the ADEX Awards were presented in a modest four-page section in Design Journal. The 2008-09 ADEX Awards will take up the entire issue.

Lighting Control & Design (LC&D) is the Los Angeles-based manufacturer of the 100% digital GR 2400™ lighting system, along with other digital lighting control products and software. Lighting Control & Design manufactures simple, yet flexible lighting controls.

The heart of LC&D's lighting controls is the GR 2400™ system: a single system ideal for any size application from a parking lot to a retail store to a high rise building. Our scalability eliminates complex choices.

LC&D offers a wide breadth of products ranging from dimming interfaces to building automation interfaces to digital thermostats all within a single system. The GR 2400™ system was developed as a complete vertically engineered package.
