Emergency Shunt Relay Features Manual Control of Both Normal and Emergency Lighting

(Los Angeles, CA – May 8, 2008) - The Emergency Shunt Relay™ (GR 2001 E/S) from Lighting Control & Design (LC&D) is ideal for applications in which loads fed by an emergency source, downstream of an automatic transfer switch, are to be dimmed or switched. The Emergency Shunt Relay will, upon the loss of normal power, shunt lights to full bright automatically, regardless of the position ("on", "dimmed" or "off") of the wall switch or dimmer.

The Dual Emergency Shunt Relay™ (GR 2001 E/S Dual) allows one SPST wall switch or dimmer to control both normal and emergency power. The Dual Emergency Shunt Relay will, upon the loss of normal power, shunt lights to full bright automatically, regardless of the position ("on", "dimmed" or "off") of the wall switch or dimmer.

Both products are ETL Listed to UL 924 (emergency power systems), and replace the traditional "ice-cube" relay approach to controlling emergency lighting.

Either product can be mounted in the same 4-S junction box as the wall switch(es) controlling the normal and emergency power, saving equipment and reducing labor costs.

LC&D's interactive Design Guide allows you to look up the configuration that's right for your application and download the appropriate AutoCAD (or Acrobat) drawing.

Lighting Control & Design (LC&D) is the Los Angeles-based manufacturer of the 100% digital GR 2400™ lighting system, along with other digital lighting control products and software. Lighting Control & Design manufactures simple, yet flexible lighting controls.

The heart of LC&D's lighting controls is the GR 2400™ system: a single system ideal for any size application from a parking lot to a retail store to a high rise building. Our scalability eliminates complex choices. The GR 2400™ System is a 100% digital solution to lighting control.

LC&D offers a wide breadth of products ranging from dimming interfaces to building automation interfaces to digital thermostats all within a single system. The GR 2400™ system was developed as a complete vertically engineered package.
